OM protein - protein search, using sw model

(without alignments) 109.706 Million cell updates/sec February 11, 2003, 18:14:11 ; Search time 21.9072 Seconds Run on:

US-09-380-738A-3 Title: Perfect score:

1 NANEEEYSIGXXXEEXAEVATEEVK 25 Sequence: 283224 seqs, 96134422 residues

Gapop 10.0 , Gapext 0.5

BLOSUM62

Scoring table:

283224 Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

PIR_73:* Database :

1: pir1:* 2: pir2:* 3: pir3:* 4: pir4:*

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

OM protein - protein search, using sw model

Run on: February 11, 2003, 18:07:35; search time 11.0825 Seconds

Title: US-09-380-738A-3

Perfect score: 107

Sequence: 1 NANBEEYSIGXXXEEXAEVATEEVK 25

Scoring table: BLOSUM62

Gapop 10.0, Gapext 0.5

Searched: 112892 seqs, 41476328 residues

Total number of hits satisfying chosen parameters: 112892

Minimum DB seq length: 0

Maximum Match 0%

Post-processing: Minimum Match 100%

Listing first 45 summaries
```

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- TISSUE SPECIFICITY: MAMMARY GLAND; MILK.
-!- POLYMORPHISM: THERE ALLIELES OF ALPHA-S2 CASEIN ARE KNOWN: A, B AND
C. THE FREQUENCIES OF THE ALLIELES IS ESTIMATED TO BE 0.85, 0.04
AND 0.11 IN THE FRENCH DAIRY BREEDS 'ALDINE' AND 'SAANEN'.
-!- SIMILARITY: BELONGS TO THE ALPHA-CASEIN FAMILY.

Neurofilament triplet L protein (68 kDa neurofilament protein) (Neurofilament light polypeptide) (NF-L) (Micro glutamic acid-rich

orotein).

Bos taurus (Bovine). Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Eutheria; Cetartiodactyla; Ruminantia; Pecora; Bovoidea;

Bovidae; Bovinae; Bos.

NCBI_TaxID=9913;

SECUENCE FROM N.A.

-!- FUNCTION: ACYL CARRIER PROTEIN IS A KEY COMPONENT IN DE NOVO FATTY

-!- FUNCTION: ACYL CARRIER PROTEIN IS A SWALL ACIDIC PROTEIN WITH A 4'-PHOSPHO-
ACID BIOSYNTHESIS. IT IS A SWALL ACIDIC PROTEIN WITH A 4'-PHOSPHO-
PANTETHEINE PROSTHETIC GROUP, ATTACHED THROUGH A SERINE, TO WHICH
GROWING FATTY ACID CHARIS ARE COVALENTLY BOUND.

-!- SIMILARITY: CONTAINS 1 ACYL CARRIER DOMAIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a stable calcium phosphate complex including phosphopeptide stabilised amorphous calcium phosphate (ACP) or its derivative, where the phosphopeptide includes the amino acid sequence: Ser(P)-Ser(P)-GLU-GLU. The amorphous phases stabilised by the phosphopeptides are a delivery vehicle for co-localisation of Ca, P and phosphate at the tooth surface in a slow-release amorphous form producing superior anticaries efficacy over prior art. The amorphous phases stabilised by the phosphopeptides are also useful as dietary
                                                                                                                                          Gaps
casein phosphopetides (CPP) and/or their salts may be used in a method for treating dentinal hypersensitivity. Pref. those CPPs contg. the sequence -Ser(P)-Ser(P)-Ser(P)- predominate. The CPPs can be extracted from a casein digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Stable calcium phosphate complex including phospho:peptide stabilised amorphous calcium phosphate - useful for treatment of dental caries, calcium malabsorption and bone diseases such as osteoporosis and osteomalacia.

supplements to increase calcium bioavailability and to help prevent diseases associated with calcium deficiencies. They are particularly useful for treatment or prevention of dental caries, calcium malabsorption and bone diseases such as osteoporosis and osteomalacia. The compositions are useful in humans and in veterinary medicine in domestic animals such as cattle, sheep, horses and companion animals e.g. eats and dogs as well as zoo animals. The present sequence represents a phosphopeptide component of a specifically claimed complex.
                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The peptide can be used as an anti-acid / anti-ulcer drug. It can also be used in food or drink production and has no side effects. The peptide is prepared from milk whey, or from whey protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New aminoacid peptide(s) with no side-effects - useful as antacid drugs and antiulcer drugs and used in foods and drinks

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents bovine alpha-52 casein precursor. Peptides having an amino acid sequence which is substantially identical to the C-terminal end of an alpha-52 casein precursor, are used for manufacture of a medicament or foodstuff for promoting growth in humans or animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Manufacture of medicament or foodstuff for promoting growth - using peptide(s) with a sequence identical to the C-terminal end of an alpha-S2 casein precursor
                                                                                                                                                                                                                                                                                          Bovine alpha-S2 casein precursor; growth promoting; mitogenic assay; platelet-derived growth factor; insulin-like derived growth factor;

                                                                                                                                                                                                  The invention relates to a composition comprising a peptide or its derivative. The peptide contains an amino acid sequence from alpha-S2 casein precursor. The peptides stimulate the growth of fibroblasts, and thus the synthesis and secretion of collagen. The peptides also stimulate of skin surface. The peptide is useful in the formation and regeneration in the form of a toothpasts or a chewing yum, for alleviating or preventing periodontal disease and a medicament in the form of a cosmetic composition for alleviating or preventing an effect of aging, particularly wrinkling of the skin. The present sequence is bovine alpha-S2 casein precursor protein.
                                                                                                                                                                                                                                                                                                                                                                     .

The peptide may be prepd. by completely digesting casein in soln. with a proteolytic enzyme, adding mineral acid to the soln. to adjust the pH to 4.7, removing any precipitate, adding calcium chloride to cause aggregation of the peptides in soln. and separating the aggregated phosphopeptides. This method allows prodn. In the phosphopeptide by industrial methods. The phosphopeptide has anticariogenic activity and may be used as a dietectic. The peptide may be used in a microbiological growth medium, as a dietary see also AAR28425-33.

The peptide may be prepd. by completely digesting casein in soln. with a proteolytic enzyme, adding mineral acid to the soln. to adjust the pH to 4.7, removing any precipitate, adding calcium chloride to cause aggregation of the peptides in soln. and separating the aggregated phosphopeptides. This method allows prodn.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           note= "post-translationally phosphorylated serine"
This is an example of a highly generic formula for a phosphopeptide of length 5-13 amino acids. The peptides can be made synthetically (e.g. chemical synthesis or genetic engineering) or they can be extracted from cereals, nuts or vegetables or by fractionating a digest of casein, alpha-s-casein, beta-casein or a salt of it. Compositions comprising the peptide may take the form of foodstuff or confectionery, dentifrices; mouthwashes and preparations for topical application to teeth or gingival tissue. The peptides significantly increase absorption of calcium, phosphate and iron in the gut. See AAR14447-R14451.

These peptides are pref. in the form of salts selected from alkaline metal, alkaline earth metal salts such as Na, Ca, Zh, Cu, Al, K, Sr, Mg and Ni salts. These peptides are pref. present as a Zh/phosphopeptide complex or aggregate. these peptides have anti-calculus potential, and are anti-caries and anti-
of the phosphopeptide by industrial methods. The phosphopeptide has anticariogenic activity and may be used as a dietectic. The peptide may be used in a microbiological growth medium, as a dietary supplement or as a fertiliser. See also AAR28425-33.

The peptide may be used with an anti-calculus agent, e.g. alkali metal pyrophosphate, in a compsn. for controlling dental tartar. The compsn. inhibits conversion of hyroxyapatite on the teeth. The compsn. is used in the form of a mouthwash, toothpaste, gel, lozenge or chewing gum, for care of the See also AAR32308-12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Phospho-peptide(s) for dental tartar control - are included in compons. With pyrophosphate(s) or zinc salts to provide good

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ser(P) = post-translationally phosphorylated serine. A mixture of casein phosphopeptides (CPP) and/or their salts may be used in a method for treating dentinal hypersensitivity. Pref. those CPPs contg. the sequence -Ser(P)-Ser(P)-Ser(P)- predominate. The CPPS can be extracted from a casein digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treatment of dentinal hypersensitivity - using casein, component of casein, phospho-protein or phospho-peptide or their salts

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequences given in AAR31237-42 represent phosphopeptides which were used as the active agents in an oral composition. These peptides were stabilised by an anionic polymeric stabiliser. The anionic polymers were chosen from a group consisting of carboxylate anionic polymers polymers, polymers having both a carboxylate and sulfonate moiety, and other such mixtures. The anionic polymeric a sulfonate moiety and other such mixtures. The anionic polymeric stabiliser inhibits destabilisation of the phosphopeptide in the oral source may be used for inhibiting caries and gingivitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Peptides (AAR68936-40) are phosphopetides resulting from the tryptic the greation of sodium caselnate. The peptide shown here is derived from alpha(s1), alpha(s2).caselnate (comprising alpha(s2), alpha(s2), alpha(s2), and alpha(s6). The peptides contain the amino phospholistidine, and include in their sequence aspartate and glutamate. The phosphopetides form part of a novel composition containing the sorbitol, mannitol, xylitol, lactitol, collobiitol or mixtures of sorbitol/mannitol or sorbitol/xylitol. The compositions can be used instead of conventional sugars to manufacture confectionary products. The phosphopetides are known to inhibit caries and gingivitis and can act as a source of calcium ions to promote/enhance remineralisation.
                                                                                                                                                                                                                                                                                                                                                 Crystalline poly:ol compositions for use in confectionery and pharmaceuticals - contain a phospho:peptide uniformly distributed within the crystal matrix and can improve oral
